

## How To Assemble A Quad Bike

Rear Wheels - Insert the rear wheels (the ones without break discs) on to the rear drive shaft, ensuring the wood rough key is aligned with the spacer on the back wheel, tighten the nut to ensure the wheel is securely in place.

Handle Bars – Place both top and bottom clamps onto the handle bars, locate ignition barrel and line up with the front holes on the handle bar mount, tighten the nuts to ensure the handle bars are secure.

Front Wheels – Remove the bolt and nut from the hub carrier, place the hub and wheel assembly onto the carrier, and tighten ensuring there is no play.

## How To Assemble A Quad Bike

Tie Rods – Remove the nut and body from the end of the tie rod, placing the tie rod above the mounting bracket on the hub, tighten the nut and bolt to ensure there is no play.

Front Bumper – Remove the nut and bolts from bumper mount, place the bumper into position and tighten the nut and bolts..

Mudguards – Place the mudguards on the bracket, then secure with the nut and bolts supplied.

Please make sure all nuts and bolts are tightened correctly and brakes are adjusted correctly.
